WARNING: If the information in these instructions is not followed exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

WHAT TO DO IF YOU SMELL GAS

• Do not try to light any appliance.
• Do not touch any electrical switch; do not use any phone in your building.
• Immediately call gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
• If you cannot reach your gas supplier, call the fire department.

- Installation and service must be performed by a qualified installer, service agency or the gas supplier.
Introduction

We welcome you as a new owner of a DVL Insert. In purchasing this fireplace insert you have joined the growing ranks of concerned individuals whose selection of an energy system reflects both a concern for the environment and aesthetics. It is one of the finest home heaters the world over. This manual will explain the installation, operation, and maintenance of this heater. Please familiarize yourself with the Owner's Manual before operating your heater and save the manual for future reference. Included are helpful hints and suggestions that will make the operation and maintenance of your new heater an easier and more enjoyable experience. We offer our continual support and guidance to help you achieve the maximum benefit and enjoyment from your heater.

Important Information

No other DVL Insert has the same serial number as yours. The serial number is below and to the left of the gas control valve. This serial number will be needed in case you require service of any type.

Model: DVL Insert GSR
Serial Number: 
Purchase Date: 
Purchased From: 

Register your warranty online at: traviswarranty.com
Or, mail your warranty card to:
Travis Industries House of Fire
4800 Harbour Pointe Blvd. SW
Mukilteo, WA 98275

Save Your Bill of Sale.
To receive full warranty coverage, you will need to show evidence of the date you purchased your heater. Do not mail your Bill of Sale to us.

We suggest that you attach your Bill of Sale to this page so that you will have all the information you need in one place should the need for service or information occur.

Listing Details

This appliance was listed by Intertek. The listing label is attached to the appliance near the gas control valve. A copy is shown on page 45.

Massachusetts Approval

This manual has been submitted to the Massachusetts Board of State Examiners of Plumbers and Gas Fitters

National Fireplace Institute

We suggest that our gas hearth products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) as NR Gas Specialists.

Safety Precautions

**IF YOU SMELL GAS:**
* Do not light any appliance
* Extinguish any open flame
* Do not touch any electrical switch or plug or unplug anything
* Open windows and vacate building
* Call gas supplier from neighbor's house, if not reached, call fire department

This unit must be installed by a qualified installer to prevent the possibility of an explosion. Your dealer will know the requirements in your area and can inform you of those people considered qualified. The room heater should be inspected and cleaned before use and at least annually by a qualified service person. More frequent cleaning may be required due to excessive lint from carpeting, bedding material, etc.

The instructions in this manual must be strictly adhered to. Do not use makeshift methods or compromise in the installation. Improper installation will void the warranty and safety listing.

This heater is either approved for natural gas (NG) or for propane (LP). Burning the incorrect fuel will void the warranty and safety listing and may cause an extreme safety hazard. Direct questions about the type of fuel used to your dealer. Check for a label on the flame adjust knob on the gas control valve (this is the best place to check). You may also check for a label on the gas control valve body.

Contact your local building officials to obtain a permit and information on any installation restrictions or inspection requirements in your area. Notify your insurance company of this heater as well.

If the flame becomes sooty, dark orange in color, or extremely tall, do not operate the heater. Call your dealer and arrange for proper servicing.

Do not operate if any portion of the heater was submerged in water or if any corrosion occurs. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system that has been under water.

Do not store or use gasoline or other flammable liquids in the vicinity of this heater.

It is imperative that control compartments, screens, or circulating air passageways of the heater be kept clean and free of obstructions. These areas provide the air necessary for safe operation.

Do not operate the heater if it is not operating properly in any fashion or if you are uncertain. Call your dealer for a full explanation of your heater and what to expect.
• Do not place clothing or other flammable items on or near the heater. Because this heater can be controlled by a thermostat there is a possibility of the heater turning on and igniting any items placed on or near it.

• The viewing glass should be opened only for lighting the pilot or conducting service.
• Any safety screen or guard removed for servicing must be replaced prior to operating the heater.
• Do not operate with the glass removed or damaged.

• Operate the heater according to the instructions included in this manual.
• If the main burners do not start correctly turn the gas off at the gas control valve and call your dealer for service.
• This unit is not for use with solid fuel
• Do not place anything inside the firebox (except the included fiber logs).
• If the fiber logs become damaged, replace with Travis Industries log set.

• Children and adults should be alerted to the hazards of high surface temperature and should stay away to avoid burns or clothing ignition. Young children should be supervised when they are in the same room as the heater.

• Travis Industries, Inc. grants no warranty, implied or stated, for the installation or maintenance of your heater, and assumes no responsibility of any consequential damage(s).

• Light the heater using the built-in igniter. Do not use matches or any other external device to light your heater.
• Allow the heater to cool before carrying out any maintenance or cleaning.

• Never remove, replace, modify or substitute any part of the heater unless instructions are given in this manual. All other work must be done by a trained technician. Don’t modify or replace orifices.

• Instruct everyone in the house how to shut gas off to the appliance and at the gas main shutoff valve. The gas main shutoff valve is usually next to the gas meter or propane tank and requires a wrench to shut off.

• Do not throw this manual away. This manual has important operating and maintenance instructions that you will need at a later time. Always follow the instructions in this manual.

• Plug the heater into a 120V grounded electrical outlet. Do not remove the grounding plug.
• Don’t route the electrical cord in front of, over, or under the heater.
Features and Specifications

**Features**
- Ember Fyre™ Burner for "Wood Fire" Look
- Works During Power Outages (battery backup system)
- Blower and Remote Control Included
- Standing or Intermittent (GreenSmart) Pilot
- Convenient Operating Controls
- Variable-Rate Heat Output
- Accent Light

**Installation Options**
- Residential or Mobile Home
- Fireplace Insert
- Masonry or Factory Built (Metal) Wood-Burning Fireplace

**Heating Specifications**

<table>
<thead>
<tr>
<th></th>
<th>Natural Gas</th>
<th>Propane</th>
</tr>
</thead>
<tbody>
<tr>
<td>Approximate Heating Capacity (in square feet)*</td>
<td>600 to 2,000</td>
<td>600 to 2,000</td>
</tr>
<tr>
<td>Maximum BTU Input Per Hour</td>
<td>40,000</td>
<td>40,000</td>
</tr>
</tbody>
</table>

* Heating capacity will vary with floor plan, insulation, and outside temperature.

**Dimensions**

- 29” 4x6 Panels
- 33-3/8” 8x10 Panels
- 36-3/8” 10x13 Panels

- 40” 4x6 Panels
- 44-3/16” 8x10 Panels
- 48-3/16” 10x13 Panels

* Includes trim

NOTE: on older style panels the 3/8” standoffs are no longer required and may be bent back.

**Electrical Specifications (for optional blower)**

Electrical Rating ...................................................... 115 Volts, 1.5 Amps, 60 Hz (180 watt)

**Fuel**

This heater is shipped in natural gas (NG) configuration but may be converted to propane (LP) using a conversion kit. The sticker on top of the gas control valve will verify the correct fuel.
Installation Warnings

- Failure to follow all of the requirements may result in property damage, bodily injury, or even death.
- This heater must be installed by a qualified installer who has gone through a training program for the installation of direct vent gas appliances.
- This appliance must be installed in accordance with all local codes, if any; if not, follow ANSI Z223.1 and NFPA 54(88).
- In Manufactured or Mobile Homes must conform with Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280, or, when such a standard is not applicable, the Standard for Manufactured Home Installations, ANSI/NCSBCS A225.1. This appliance may be installed in Manufactured Housing only after the home is site located.
- The heater is designed to operate on natural gas, or propane (LP).
- All exhaust gases must be vented outside the structure of the living-area. Combustion air is drawn from outside the living-area structure.
- Notify your insurance company before hooking up this heater.
- The requirements listed below are divided into sections. All requirements must be met simultaneously. The order of installation is not rigid – the qualified installer should follow the procedure best suited for the installation.

Packing List

- LP Orifices
- Log Set
- Remote Control
- LP Manifold Cover (see page 47)
- "Fireplace Altered" tag (attach to the fireplace)
- Cover Plate for Receiver (with screws)
- Panel Trim Rectangular & Button Plug (see page Error! Bookmark not defined.).

Additional Items Required

- If using lp (propane) a conversion kit is required (sku 94400999 – GSR Stepper Motor Kit)
- Faceplate
- Simpson Duravent 6-5/8" to 3" & 4" Co-Linear Adapter with flashing (Travis part # 98900124)
- 3" and 4" Diameter Gas Liner
- Direct Vent Cap (Use Simpson Duravent High Wind Cap)
- Gas Line Equipment (shutoff valve, pipe, etc.)

Items Packed with the Face

- Face with attachment hardware and cove covers
- Face Installation Instructions

Order of Installation

1. Install the top convection deflector (see page 8).
2. If the heater is to use propane, convert the appliance (see page 47).
3. Install gas line into the fireplace (do not connect to unit).
4. Position the heater.
5. Connect the gas line and gas vent to the appliance.
6. Install the optional surround panels and trim. Attach the on/off switch.
7. Follow the instructions under "Finalizing the Installation" on page 28.
Top Convection Deflector

Install the top convection deflector as shown to the right.

The deflector is shipped on top of the insert. The screws are shipped inside the owner's pack.

Fireplace Requirements

- Insert must be placed within a code-conforming masonry fireplace or tested and listed factory-built (metal) wood-burning fireplace. Repair any fireplace damage prior to installation.
- Because the insert uses a circulation blower, clean the fireplace, smoke shelf, and chimney prior to installation.
- This heater may be placed in a bedroom. Please be aware of the large amount of heat this appliance produces when determining a location.

<table>
<thead>
<tr>
<th>Fireplace Sizing</th>
<th>3-Piece Panel</th>

</tr>
<tr>
<td>d Hearth Extension</td>
<td>1-1/4” (32mm)</td>
<td>0” (0mm)</td>
</tr>
</tbody>
</table>

- The gas and electrical line should be installed prior to installing the heater.
- For tight fits (under 28”) see the section “Removing the Vent Connector”
- See “Leveling Bolts” for details on leveling the heater.

Attach the “This fireplace has been altered…” plate to the fireplace (use two screws or other suitable method). You may wish to place it in a location where it will be covered by the surround panels.
Factory-Built (Metal) Wood-Burning Fireplace Requirements

**NOTE:** Any parts that are removed must be removed in a way that would allow them to be re-installed if the insert is ever removed (removal of rivets or screws is acceptable).

The damper ("A") and grate (with log set) ("B") must be removed (see the illustration below).

The smoke shelf ("C"), internal baffles ("D"), screen ("E"), masonry lining or refractory ("G" & "I"), and metal or glass doors ("F") may be removed (if applicable).

The fireplace must be permanently marked to indicate that it has been altered and is no longer suitable for burning solid fuel (wood), unless the removed parts are re-installed. Cutting of any sheet metal parts is prohibited, except the metal floor ("J") as noted below.

The insulation ("H"), and any structured rigid frame members must not be removed or altered (side and top of door frame, side and top of the face of the fireplace, metal sides, etc.).

The metal floor ("J") may be removed to allow additional room for installation of the insert. If the floor is removed the insert must be placed directly on the metal base of the metal fireplace.

---

**Hearth Requirements**

The heater and face must not contact combustible surfaces. A non-combustible hearth extension is not required. However, if the heater is installed next to the floor, we recommend a hearth to protect the flooring surface from discoloration or other negative impact from the heater.

**Leveling Bolts**

This heater includes front and rear leveling bolts to accommodate fireplaces with a step-down firebox.

**NOTE:** To access the rear leveling bolts, remove the burner (see page 47).
Due to the high temperature of the heater, it should be located out of traffic and away from furniture and draperies.

Clearances

<table>
<thead>
<tr>
<th>Minimum Clearances</th>
</tr>
</thead>
<tbody>
<tr>
<td>k Sidewall to Insert</td>
</tr>
<tr>
<td>l Side Facing (non-combustible)</td>
</tr>
<tr>
<td>m Top Facing* (non-combustible)</td>
</tr>
<tr>
<td>n Mantel* (combustible or non-combustible)</td>
</tr>
<tr>
<td>x Hearth Extension (3-Piece Panel)</td>
</tr>
<tr>
<td>x Hearth Extension (1-Piece Panel)</td>
</tr>
</tbody>
</table>

* Measured from the base of the insert.

**NOTE:** the non-combustible top facing must extend 35.5" (902mm) above the base of the insert or to the bottom of the mantel (whichever is less).

Mantel Clearances

The maximum mantel depth is 12".

**NOTE:** The combustible area above the facing must not protrude more than 3/4" from the facing. If it does, it is considered a mantel and must meet the mantel requirements listed in this manual.
Face Mounting Brackets – Arched, Artisan, Metropolitan, Victorian Lace

Some Arched, Artisan, Metropolitan and Victorian Lace Faces include old brackets that will not mount to the heater (see illustration below). For these faces, make sure to use the new mounting brackets (either included with the heater or available through your dealer - SKU 225-20054).

**WARNING**: When attaching the Victorian Lace Face, **do not over-tighten the screws**. Over-tightening the screws may damage the face – simply tighten the screws until they contact the face.

![New Brackets](image1)

![Old Brackets](image2)

**NOTE**: The brackets install with this pair of closely spaced flanges at the top.

**NOTE**: The brackets install into the lower pair of holes on the insert.

Install the face mounting brackets with the included nuts.
Gas Line Requirements

MASSACHUSETTS INSTALLATIONS - **WARNING:**
THIS PRODUCT MUST BE INSTALLED BY A LICENSED PLUMBER OR GAS FITTER WHEN INSTALLED WITHIN THE COMMONWEALTH OF MASSACHUSETTS.

OTHER MASSACHUSETTS CODE REQUIREMENTS:
- Flexible connector must not be longer than 36 inches.
- Shutoff valve must be a “T” handle gas cock.
- Only direct vent sealed combustion products are approved for bedrooms or bathrooms.
- Fireplace dampers must be removed or welded in the open position prior to the installation of a fireplace insert or gas log.
- A carbon monoxide (CO) detector is required in the same room as the appliance.

- The gas line must be installed in accordance with all local codes, if any; if not, follow ANSI 223.1 and the requirements listed below.
- A manual shutoff valve is required within 3’ of the heater. It should be placed upstream of the flex line (if used) and may be installed behind the access door inside the heater.
- The heater and gas control valve must be disconnected from the gas supply piping during any pressure testing of that system at test pressures in excess of 1/2 psig. For pressures under 1/2 psig, isolate the gas supply piping by closing the manual shutoff valve.
- Leak test all gas line joints and the gas control valve prior to and after starting the heater.
- This heater is designed either for natural gas or for propane (but not for both). Check the sticker on the top of the gas control valve to make sure the correct fuel is used (see illustration on page 4).
- Installation must be performed by a qualified installer, service agency or the gas supplier (In Massachusetts a licensed plumber/gasfitter).

Gas Line Location

The gas inlet accepts a 1/2" MPT.

Fireplace Opening

Shutoff Valve (secured to the fireplace insert)

2-3/4"

Gas Inlet Pressure

<table>
<thead>
<tr>
<th>Fuel Type</th>
<th>Standard Input Pressure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Natural Gas</td>
<td>7&quot; W.C. (1.74 kPA)</td>
</tr>
<tr>
<td>Propane</td>
<td>13&quot; W.C. (2.73 kPA)</td>
</tr>
</tbody>
</table>

- If the pressure is not sufficient, make sure the piping used is large enough, the supply regulator is adequately adjusted, and the total gas load for the residence does not exceed the amount supplied.
- The supply regulator (the regulator that attaches directly to the residence inlet or to the propane tank) should supply gas at the suggested input pressure listed above. Contact the local gas supplier if the regulator is at an improper pressure.

Electrical Connection

- Route the power cord out of the access hole on the right side of the appliance.
- Plug the power cord into a grounded 120 Volt outlet (do not remove the grounding pin).
- The electrical connection may also be made using the optional Wiring Kit (SKU 97200315).
**Vent Requirements**

Travis Industries manufactures a vent kit specifically for this insert (sku 96200331). It includes 30’ (10M) of vent, hose clamps, and a prairie cap. The flashing on the cap is 18” (458mm) by 18” (458mm).

- The gas appliance and vent system must be vented directly to the outside of the building, and never be attached to a chimney serving a separate solid fuel or gas-burning appliance. Each direct vent gas appliance must use its own separate vent system.
- Make sure the exhaust pipe on the heater connects to the exhaust portion of the cap. The illustrations below show how the flex liners should be attached.
- The exhaust vent must reline the entire length of the chimney and terminate above the chimney top.
- Be careful not to crimp or rupture the liner when bending it into chimney offsets.
- When installed, the vent must meet all of the vent manufacturer’s requirements.
- Make sure to use the following:
  - 4” UL 441 or 1777 Gas Liner for Exhaust, 3” UL 441 or 1777 Gas Liner for Air Inlet
  - Simpson Duravent 6-5/8” to 3” & 4” Co-Linear Adapter and Flashing (Travis Part # 98900124).
  - Simpson Duravent High-Wind Vertical Termination Cap (46DVA-VCH) or Prairie Cap

**Altitude Considerations**

- This heater has been tested at altitudes ranging from sea level to 6,000 feet (1,800 M). In this testing we have found that the heater, with its standard orifice, burns correctly with just an air shutter adjustment.
- Failure to adjust the air shutter properly may lead to improper combustion which can create a safety hazard. Consult your dealer or installer if you suspect an improperly adjusted air shutter.
Vent Restrictor

**WARNING:** Restrictor adjustment should only be done by a qualified installer. Only those installations determined to be over-drafting require this adjustment. The best indication of over-drafting is a hyper-active flame pattern (flames that move too quickly). If the air shutter is constricted, the flames become short and yellow, yet still very active. Over-drafting may affect the pilot, but this is not the best way to determine over-drafting. Over-drafting is most likely in tall venting configurations (especially if using an “Exhaust Only Re-Line”). Do not over-restrict the vent (this leads to ghosting or lifting flames - reduce restrictor setting).

To Access the Restrictor:
Remove the face.

**WARNING:** Use a glove to protect your hand from burns.

To Adjust the Restrictor:

1. Determine a restrictor position. Start low (move the restrictor a maximum two positions at a time) and thoroughly test the heater before adjusting further.
2. Lift up the adjustment plate and move it so the correct notch falls into the slot on the adjustment bracket.

This restrictor is in position 1 (factory setting).

To adjust, lift up on the adjustment plate and push it back (use pliers if necessary).

This restrictor is in position 2.

Vent Installation

Exhaust 102mm (4”)  
Inlet 76mm (3”)

102mm (4”) dia. Gas Liner  
76mm (3”) dia. Gas Liner

Termination Cap (Simpson Part # 991)

168mm (6-5/8”) to 76mm (3”) & 102mm (4”) Co-Linear Adapter (Travis Part # 98900124)

Use hose-clamps to secure the vent.
Alternative Method: use high-temperature silicone and secure with screws.

Use hose-clamps to secure the vent.
Alternative Method: use high-temperature silicone and secure with screws.
Vent Location

- A vent restrictor is built into the appliance to adjust the flow rate of exhaust gases. This ensures proper combustion for all vent configurations. Depending upon the vent configuration, you may be required to adjust the restrictor position.

**NOTE:** Vent location changes based upon restrictor position. Position # 1 is shown to the right. Each restrictor position moves the vent location forward (toward the fireplace opening) approximately 1/4".

Vent Configurations

**Inlet & Exhaust Re-Line**

- Direct Vent Cap (part # 991)
- 6-5/8" to 3" & 4" Colinear Adapter & Flashing (Travis Part # 98900124)
- Inlet 3" dia. Gas Liner
- Recommended Block-Off Plate (non-combustible metal and/or insulation). Prevents odors from chimney entering room.

**Exhaust Only Re-Line**

- Exhaust 4" dia. Gas Liner
- Any cracks or damage inside the chimney must be repaired.
- A block-off plate must seal the intake to the chimney space. This way air is drawn down the chimney for combustion air.
- Block-Off Plate (non-combustible materials)
- Inlet

**Z.C. (Metal) Wood-Burning Fireplace**

**Masonry Fireplace**

**NOTE:** You may use either re-line configuration with a masonry or zero-clearance fireplace.
Vent Connector Removal and Installation

- The vent connector is shipped attached to the insert, but may be removed to facilitate tight installations. See the directions below for installation.

1. Route the flex vent through the chimney from above (leave an extra 3’ at the top). Make sure the flex is thoroughly stretched.

2. Remove the vent connector and attach it to the flex vent (see the instructions on the following page). NOTE: be careful of the anti-seize on the connector – it will stain clothing, etc.

3. Pull on the flex vent until the vent connector is at the same height as the insert. Temporarily attach the flex vent to the top of the chimney (leave extra slack).

4. Slide the insert into place, guiding the vent connector into the guides on top of the insert.

5. Attach the vent connector to the appliance (see the following page for details).

6. Remove any excess slack in the flex line and attach the vent termination.
Vent Connector Removal and Installation (continued)

**Vent Connector Removal**

- Pull the vent connector rod forward.
- **WARNING:** The anti-seize on the vent connector can stain clothing, carpets, or other items.
- Slide the connector to the rear. It will "snap" out.

**Vent Connector Installation**

- Attach the flex vent to the vent connector.
- Slide the insert into place, lining up these guides with the edges of the vent connector.
- Push the vent connector rod in, lift slightly, and line it up so the tabs on the end of the rod engage the hooks on the vent connector.
- Pull on the vent connector rod until the vent connector snaps into place. Slide the vent connector rod in to conceal it.

**WARNING:** The anti-seize on the vent connector can stain clothing, carpets, or other items.
Surround Panel Installation

</tbody>
</table>

NOTE: The insert may be installed without surround panels.

NOTE: The insert may be installed without surround panels.

1. Follow the directions to the right to install the side panels.

2. Follow the directions below to install the top panel.

Pre-thread the holes on the surround panels with the screws included in the surround panel kit.

Line up each side surround panel and insert two screws from the inside to secure in place.

Run the power cord to the right of the insert.

Cover plugs for on/off switch and rheostat

Install the button plug and switch plug into the surround panel trim to conceal the mounting holes (see the illustration below).

Install the top panel so the tabs insert into the joggle clips on the top panel.

Optional Knock-Out

An optional knock-out is provided if the power cord is routed behind the surround panel.
1-Piece Surround Panel

- DVL – 34” by 44” 96100319
- DVL – 30-1/2” by 42” 96100323

NOTE: The panels may be cut down in size and placed within the fireplace opening.

Routing the Power Cord

Because this panel fits flush against the fireplace facing, the panel does not have a notch allowing the power cord to exit the fireplace. We recommend using the insert wiring kit (sku 97200315) to route power to the insert. Otherwise, route the power cord behind the panel to the right side (the panel or fireplace may be notched, if required).

Installation

1. Attach the mounting brackets as shown below.

   a. Remove the two screws from the air deflector.

   b. Slide the upper mounting brackets into place. NOTE: The brackets slide under the air deflector. Secure the upper brackets with the included screws.

   c. Attach the lower mounting brackets with two screws (use the lower holes).

   d. Replace the two screws removed in step “a”.

   e. Install two screws into the upper holes on the mounting brackets. NOTE: The upper screws keep the brackets from swiveling.
2. Attach the surround panel as shown below.
**Glass Frame Removal and Installation**

**Warning:** The appliance must be completely cool before removing the glass.

**Warning:** Do not strike or slam the glass.

**a** Open the four latches holding the glass frame in place (start with the two below the glass) - follow the directions shown to the right.

**b** Lift the glass frame up and pull it forward to remove. **NOTE:** You may need to lift the glass frame while re-attaching.

**Re-Attaching the Glass Frame:**

a) Hang the glass frame on the firebox.
b) While holding in place, attach the upper latches (follow the instructions to the right in reverse).
c) Lift the glass frame slightly and attach the lower latches.

**NOTE:** Replace the cove covers for those faces using them.
Glass Frame Removal and Installation (continued)

The glass latch can come loose from the glass frame. This occurs when the latch is turned 1/8 turn when disengaged from the unit. Follow the directions below to re-install the latch if it comes loose.

1. **Glass**
   - Hold the latch at an angle and insert it into the slot on the glass frame. Note how the washer fits in front of the flange on the glass frame. You will need to push slightly to get the latch to insert.

2. **Latch**
   - Once fully inserted, turn the latch until it is level.
Log Set Installation

! The logs are fragile, especially after being exposed to heat.
- Make sure the gas control valve is “OFF” and the heater is cool prior to conducting service.
- Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.
- If using propane (LP), convert the appliance before installing the logs (see page 47).
- The burner must be correctly positioned before installing the logs. Make sure the burner is fully seated and the pilot is properly aligned. See page 47 for details on burner removal.

Rear Log Placement

The rear log has two obround holes on the bottom. Place the log so the pins on the burner insert into the holes on the log (see photos below). Once in place, carefully pull the log all the way forward. This allows the log to glow above the rear burner holes. NOTE: If you encounter sooting on the rear log, move the log back until sooting is eliminated.
24 Finalizing the Installation

Left Log Placement

The left log has a hole on the bottom. Place the log so the pin on the burner inserts into the hole on the log (see photos below). Position the log so the right side straddles the burner holes. The log must not cover any burner holes.

Right Log Placement

The right log has a hole on the bottom. Place the log so the pin on the bracket inserts into the hole on the log (see photos below). Make sure the log is pushed back so it sits flat against both sides of the bracket attached to the burner.
**Left Twig Placement**

The left twig has two holes in the bottom that fit over the pins on the back and left log (see photos below). Place the twig as shown below.

**Right Twig Placement**

The right twig has one hole in the bottom that fits over the pin on the back log (see photo below). The bottom of the log rests on the right log. Place the log as shown below.
Front Ember Chunk Placement

Place the ember chunk as shown in the photos below. Make sure the ember chunks does not cover any burner holes.
Ember Placement

A bag of embers is included with your appliance to enhance the firebox. Place a layer of embers along the edges of the burner, on top of screw-heads, and along the perimeter to enhance the aesthetics of the firebox. Do not place embers over any burner holes. See the photo below. Place a layer of embers along any visible edges of the burner.

Rockwool Installation

The included rock wool is placed on top of the burner to enhance the glow from the burner. The rock wool works best when it is applied in a very thin, porous layer. The best method for applying the rock wool is to brush it on to the burner. Compress a clump of rockwool between your thumb and forefinger. Use a stiff brush to apply a thin layer of rockwool fibers onto the burner. Do not use the entire bag of rockwool. Use only a small amount and save the remainder. Over-use of rockwool will diminish the glow and may cause sooting or other adverse conditions.
Steps for Finalizing the Installation

1. Remove the glass (see page 21).

   **NOTE:** If using propane (LP) convert the appliance prior to installing the logs.

2. We recommend you purge the gas line at this time (with the glass removed). This allows gas to be detected once it enters the firebox, ensuring gas does not build up.

3. Make sure the accent light bulb is in place.

   **NOTE:** Take care to not touch the bulb with your fingers – use a cloth or paper towel.

4. Install the four AA batteries and receiver cover (included in the owner’s pack - see illustration below). The AA batteries act as a power backup in case the household (AC) power goes out and are required for operation. Install the 9v battery (included in the owner’s pack) into the battery holder (see illustration below). This battery is for the control panel lights. Install three AAA batteries into the remote (see illustration below). Synchronize the transmitter to the receiver (see page 30).
5. Install the logs (see page 23).
6. Replace the glass.
7. Start the heater.
8. Leak test all gas joints.
9. Check the air shutter following the directions below.

**Air Shutter Adjustment**

Let the heater burn for fifteen minutes (make sure the logs and glass are in place). The flames should be yellow with no sooting. Adjust the air shutter, if necessary, to achieve the correct looking flame.

**Correct**

Flames should be blue at the base, yellow-orange on the top.

**Not Enough Air**

If the flames are too tall or sooty on the ends, open the air shutter.

**Too Much Air**

If the flames are all blue and short, close the air shutter.

10. Attach the face following the directions included with the face.

**NOTE:** If using the Arched, Artisan, Metropolitan, or Victorian Lace Face you must use the face mounting brackets included with the heater (see page 11 for details).

11. Adjust the flame to its highest position - the flames should not contact the top of the firebox. Check the flame on low position. The flames should burn off of each burner hole. If the heater does not work correctly, contact your Travis dealer for a remedy.

12. Give this manual to the home owner for future reference and fully explain operation of this heater.
Before You Begin

- Read this entire manual before you use your new heater (especially the section "Safety Precautions" on pages 4 & 5). Failure to follow the instructions may result in property damage, bodily injury, or even death.

Remote Set-Up

Verify the Fan Control Module is On

The fan control module has a power switch. Make sure it is in the ON ("-") position (see Figure 1). This switch must remain in the ON position for the AC components to operate (Accent Light and Optional Blower). The module also supplies low-voltage for the fireplace controller. By leaving it in the OFF position, the fireplace will operate off the receiver batteries, greatly diminishing battery life.

Synchronize the Transmitter to the Receiver

The transmitter will need to be synchronized to the receiver before the remote will work correctly. Synchronizing is done in the following two steps below (see Figure 2):

a) Press the PRG (Program) button on the receiver using a paperclip or equivalent device (receiver will beep 3 times).

b) Press the "ON" button on the transmitter (receiver will beep 4 times).

NOTE: If power is cut off to the receiver for an extended period of time, you may need to re-synchronize the remote.
Starting the Heater for the First Time

- Burn the heater at a high setting with the blower off for an extended period (up to 48 hours). This will cure the painted surfaces. Fumes from the paint curing and oil burning off the steel will occur. This is normal. We recommend opening a window to vent the room.
- Condensation may appear on the glass each time you start the heater - this is normal.
- Blue Flames will occur on the heater when it first comes on. After fifteen minutes the flames will turn a more realistic yellow and orange color.
- Verify the power backup and control light batteries are installed (see page 40).

Location of Controls

Most features will be controlled by the included remote.

Swing the access door and control cover down to access the controls on the insert.
**Direct Operation**

The fireplace may be directly operated from the receiver. The three positions are below (see Figure 3):

- **ON** – Burner turns on (regardless of transmitter settings).
- **OFF** – Burner turns off (regardless of transmitter settings).
- **REMOTE** – Burner is controlled by the transmitter.

**NOTE**: When the receiver switch is turned to ON or OFF, the mode settings (Accent Light, Blower, Flame Height, Comfort Control) will remain in the same state as before the switch was moved (i.e.: the receiver “remembers” the last setting). If you wish to adjust the mode settings use the transmitter mode button to adjust the settings (see “Mode Controls” on page 36). The thermostat and burner on/off operating functions will not work on the transmitter.
Accent Light

This heater has a built-in accent light that may be turned on and off and dimmed to your preference. Turn the knob to achieve the desired light output.

Continuous Pilot / GreenSmart™ Pilot Switch

This heater may run with the pilot continuously running or in GreenSmart (intermittent) mode. For most homeowners, the GreenSmart mode is preferred (this saves fuel, doesn't give off un-needed heat). However, in some situations the homeowner may prefer to switch the heater to continuous pilot. The most typical reasons for switching to continuous pilot are:

- Very Cold Conditions – in very cold conditions you may notice that the burner does not light quickly, and the flames lift off the burner. If this is situation, we recommend you switch to continuous pilot. This will create a slight draft in the vent, allowing for the burner to light quickly and draft correctly.
- Excessive Condensation on Glass After Startup – certain installations may encounter excessive fogging on the window after startup (not just the first time the heater was started). This is an aesthetic condition that may be remedied by switching the heater to continuous pilot.
- Cold Glass or Heater Front – in very cold conditions you may notice that the heater front and glass become very cold. To remedy this, switch the heater to continuous pilot.
- Frequent On / Off Operation – if you are frequently turning the heater on and off, you may wish to leave it in continuous pilot. This allows the burner to turn on more quickly, without pilot ignition delay.
Remote Operation

Once the receiver is switched to "REMOTE" the transmitter operates the fireplace. Once you understand how the transmitter works, you will be able to operate your fireplace quickly and easily.

Display Overview

The transmitter display has four main sections (see Figure 4).

Listen for the “Beep”

Each time you press a button on the transmitter that controls the fireplace, a “beep” will come from the fireplace. When you change thermostat target settings the fireplace will not beep.

NOTE: When the receiver batteries start to get low, the receiver will beep intermittently. When the batteries are nearly depleted, the receiver will no longer beep. See “Receiver Batteries” on page 38).
Use the thermostat button to cycle through the three thermostat settings (see Figure 5).

- **MANUAL ON/OFF** – The burner will turn on and off using the remote (see Figure 6). Press the On/Off button to control the burner. When off, the display will only show the current temperature.

- **SMART THERMOSTAT** – While in smart thermostat, the transmitter will control the burner to achieve the target temperature (see Figure 7 below). Flame height will be adjusted up or down to allow operation without turning the burner on and off (also called "smart modulation"). To adjust the target temperature, press the up and down buttons until a suitable temperature is achieved.

- **STANDARD THERMOSTAT** - While in standard thermostat setting, the transmitter will turn the burner on and off to achieve the target temperature (see Figure 8 below). To adjust the target temperature, press the up and down buttons until a suitable temperature is achieved.

NOTE: if the transmitter batteries go dead while in thermostat setting (standard or smart), the appliance will shut off after approximately 24 hours.
Mode Controls (Flame, Blower, Light, Comfort Control)

Use the mode button to cycle through the four mode controls (see Figure 9 below).

Press the mode button to cycle through the mode settings.

Flame Height

Flame height may be controlled using the up and down buttons when in Flame Height Mode (see Figure 10 below). The center display will display the 7 settings, from “OFF” to “HI” for full on.

NOTE: Flame height may not be adjusted if operating in Smart Thermostat setting.

Blower Speed

The blower may be controlled using the up and down buttons when in Blower Speed Mode (see Figure 11). The center display will display the 7 settings, from “OFF” to “HI” for full on.

MANUAL MODE – INSERTS SERIAL NUMBER 3403-603662 OR GREATER

When in Manual Mode the blower will remain on, even if the burner is turned off and the heater cools. Either manually turn the blower off, or turn off the heater by pressing the On/Off button.
Mode Controls (continued)

Accent Light (Aux)
The Accent Light (night light) inside the heater may be turned on and off using the up and down buttons when in Accent Light (Aux) Mode (see Figure 12). The center display will display either “ON” or “OFF”.

![Accent Light (Aux) diagram](image)

**HINT:** The rheostat on the heater must be turned on for remote operation to work correctly. You may wish to adjust the rheostat to a desirable light output prior to operating.

**HINT:** If you wish to leave the accent light on while turning the burner off, adjust the Flame Height to “OFF” (see the previous page).

Comfort Control (rear burner)
The comfort control (rear burner) may be turned on and off using the up and down buttons when in Comfort Control Mode (see Figure 13). The center display will display either “ON” or “OFF”.

![Comfort Control (rear burner) diagram](image)
Operation

Low Battery Indicator

Transmitter Batteries
The transmitter has a battery-level indicator. When it indicates low battery voltage (see Figure 14 below), install three new AAA alkaline batteries into the transmitter (see “Transmitter Battery Installation” on page 40).

Receiver Batteries
The receiver will “beep” periodically when the receiver batteries go low. Install four new AA alkaline batteries into the receiver when this occurs (see “Receiver Battery Installation” on page 40). In applications where the appliance is required to provide heat, we recommend replacing the batteries before each heating season.

Child-Proof Feature
The child proof feature disables the control buttons, preventing un-wanted use of the remote.

- Press both the MODE and UP buttons simultaneously to turn this feature on and off (see Figure 15 below).

**HINT**: This feature is especially useful while using the thermostat setting.

Power Outages
The remote will work if household current (AC power) is disconnected. The batteries inside the receiver will continue to power the heater but the accent light and blower will not operate.
Normal Operating Sounds

Extinction Pops
It is not unusual, especially on Propane (LP) appliances, to experience a “pop” when the burner is shut off.

Pilot Assembly
The pilot flame will make a clicking sound when starting up. If left on, it will make a slight whisper sound.

Gas Control Valve
As the gas control valve is turned on and off you will hear a dull clicking sound. This is the valve opening up and shutting down.

GreenSmart Receiver
The optional GreenSmart receiver will beep when receiving commands from the GreenSmart remote.

Blower
This heater has an optional blower to push heated air into the room. You will hear the sound of air movement that increases as the speed is increased.

Blower Snap Disk
This part can produce a clicking sound as it turns the blower on and off.

Fan Controller
This device makes a light humm that is audible in close proximity.

Normal Operating Odors
This appliance has several areas that reach high temperatures. Dust or other particles on these areas may burn and create an odor. This is normal during start-up. You may notice the smell is more acute if the appliance was left idle for a long period.
Maintaining Your Heater’s Appearance

Fingerprints or other marks left on the optional plated surface may become etched in place if they are not wiped clean prior to turning the heater on. Clean the plated surfaces with denatured alcohol and a soft cloth (with the heater cool). Other cleaners may leave a film that may become etched into the surface.

Battery Replacement

Receiver Battery Installation

Install four AA batteries into the receiver (see illustration below). You can use the batteries from the battery backup tray on the appliance. See the installation instructions for details. These batteries control the comfort control and act as a power-backup in case the household (AC) current goes out.

Control Panel Light Battery

LED lights and a 9v battery are used to illuminate the control panel when the concealment cover is lifted. If the LED lights do not operate, replace the 9v battery (see the illustration below).

Transmitter Battery Installation

Install the three included AAA batteries into the remote (see illustration below).
Accent Light Replacement

An accent light is included in your heater to provide additional lighting. This bulb will burn out over time. To replace, follow the directions below:

- Shut off gas to the heater and let it cool for 15 minutes.
- Remove the glass (see page 21) and logs (see page 23).
- Replace the halogen bulb with the following bulb:
  (NOTE: Take care to not touch the bulb with your fingers – use foam packing or paper towel to hold the bulb):
  35 Watt 120 Volt T4 Halogen Bulb (G6.35 Base)

Yearly Service Procedure

- Failure to inspect and maintain the heater may lead to improper combustion and a potentially dangerous situation. We recommend the following procedures be done by a qualified technician.

1. Turn the pilot flame to continuous. It should touch approximately 3/8" of the top of the flame sensor. If it does not, contact your dealer for service.
2. Shut off gas to the heater and let it cool for 15 minutes. Remove the glass (see page 21).
3. Remove the log set (NOTE: the logs are very fragile - see page 23). If severely deteriorated, replace. Check the logs for sooting. A small amount of soot along the bottom of the logs is normal. If excessive sooting is found, the heater will require adjustment. Contact your dealer.
4. Inspect the burner and remove any debris.
   - Make sure the burner is not warped, cracked, or damaged.
   - Check the firebox and area around the pilot to make sure there is no warping or damage.
   - If any problem is found, discontinue use and contact your dealer for service.
5. Replace the log set. Clean and replace the glass. If the glass is damaged, replace. Make sure the gasket along the perimeter of the glass contacts the face of the firebox and forms an air-tight seal. If it does not, re-align or replace the gasket to insure an air-tight seal.
6. Inspect the area behind the access door. Clean if necessary. Check the gas control valve and the gas lines. If damage is found, discontinue use and contact your dealer for service. Clean the air channels, ducts, and blower (if applicable).
7. Start the main burner. After 15 minutes the flames should be orange/yellow and not touch the top of the firebox. If the pilot or main burners do not burn correctly, contact your dealer for service. Monitor blower operation.
8. Remove any debris or vegetation near the vent termination. Contact your dealer if any sooting or deterioration is found near the vent termination.

Replacement Parts List

Caution: Use only Travis Industries replacement parts. Do not use substitute materials.

Warning: Do not operate appliance with the glass front removed, cracked, or broken. Replacement of the glass should be done by a licensed or qualified service person.

Contact your local Travis Industries Dealer for a Replacement Parts List
The safety (listing) label is attached to the operating tag (chained to the heater near the gas control valve). A copy is shown below.
### Limited 7 Year Warranty

Register your TRAVIS INDUSTRIES, INC. Limited 7 Year Warranty online at traviswarranty.com, or complete the enclosed Warranty card and mail it within ten (10) days of the appliance purchase date to: TRAVIS INDUSTRIES, INC., 4800 Harbour Pointe Blvd. SW, Mukilteo, WA 98275. TRAVIS INDUSTRIES, INC. warrants this gas appliance (appliance is defined as the equipment manufactured by Travis Industries, Inc.) to be defect-free in material and workmanship to the original purchaser from the date of purchase as follows:

#### EXCLUDED COMPONENTS:

- Paint, Gasketing, and Accent Light Bulbs

#### CONDITIONS & EXCLUSIONS

1. This new gas appliance must be installed by a qualified gas appliance technician. It must be installed, operated, and maintained at all times in accordance with the instructions in the Owner's Manual. Any alteration, willful abuse, accident, neglect, or misuse of the product shall nullify this warranty.
2. This warranty is nontransferable, and is made to the ORIGINAL purchaser, provided that the purchase was made through an authorized TRAVIS dealer.
3. Discoloration and some minor expansion, contraction, or movement of certain parts and resulting noise is normal and not a defect and, therefore, not covered under warranty. The installer must ensure the appliance is burning as per the rating tag at the time of installation. Over-firing (operation above the listed BTU rate) of this appliance can cause serious damage and will nullify this warranty.
4. The warranty, as outlined within this document, does not cover the chimney components or other Non-Travis accessories used in conjunction with the installation of this product. If in doubt as to the extent of this warranty, contact your authorized TRAVIS retailer before installation.
5. Travis Industries will not be responsible for inadequate performance caused by environmental conditions such as nearby trees, buildings, roof tops, wind, hills or mountains or negative pressure or other influences from mechanical systems such as furnaces, fans, clothes dryers, etc.
6. This Warranty is void if:
   a. The unit has been operated in atmospheres contaminated by chlorine, fluoride or other damaging chemicals.
   b. The unit is subject to submersion in water or prolonged periods of dampness or condensation.
   c. Any damage to the unit, combustion chamber, heat exchanger or other components due to water, or weather damage which is the result of, but not limited to, improper chimney/venting installation.
   d. Exclusions to this 7 Year Warranty include: injury, loss of use, damage, failure to function due to accident, negligence, misuse, improper installation, alteration or adjustment of the manufacturer’s settings of components, lack of proper and regular maintenance, damage incurred while the appliance is in transit, alteration, or act of God.
   e. This 7 Year warranty excludes damage caused by normal wear and tear, such as paint discoloration or chipping, worn or torn gasketing, corroded or cracked logs, embers, etc. Also excluded is damage to the unit caused by abuse, improper installation, modification of the unit, drilling of the orifice, or the use of fuel other than that for which the unit is configured. Units are shipped for natural gas and must be converted to propane using a conversion kit. Confirm fuel configuration with your installer.
   f. Damage to gold or nickel surfaces caused by fingerprints, scratches, melted items,- or other external sources left on the gold or nickel from the use of cleaners other than denatured alcohol is not covered in this warranty.
7. TRAVIS INDUSTRIES, INC. is free of liability for any damages caused by the appliance, as well as inconvenience expenses and materials. Incidental or consequential damages are not covered by this warranty. In some states, the exclusion of incidental or consequential damage may not apply.
8. This warranty does not cover any loss or damage incurred by the use or removal of any component or apparatus or to from the gas appliance without the express written permission of TRAVIS INDUSTRIES, INC. and bearing a TRAVIS INDUSTRIES, INC. label of approval.
9. Any statement or representation of TRAVIS products and their performance contained in TRAVIS advertising, packaging literature, or printed material is not part of this 7 year warranty.
10. This warranty is automatically voided if the appliance’s serial number has been removed or altered in any way. If the appliance is used for commercial purposes, it is excluded from this warranty.
11. No dealer, distributor, or similar person has the authority to represent or warrant TRAVIS products beyond the terms contained within this warranty. TRAVIS INDUSTRIES, INC. assumes no liability for any damages caused by the appliance, as well as inconvenience expenses and materials. Incidental or consequential damage are not covered in this warranty. Miles or service charges are not covered by this warranty. This charge can vary from store to store.

#### IF WARRANTY SERVICE IS NEEDED:

1. If you discover a problem that you believe is covered by this warranty, you MUST report it to your TRAVIS dealer WITHIN 30 DAYS, giving them proof of purchase, the purchase date, and the model name and serial number.
2. Travis Industries has the option of either repairing or replacing the defective component.
3. If your dealer is unable to repair your appliance’s defect, he may process a warranty claim through TRAVIS INDUSTRIES, INC., including the name of the dealership where you purchased the appliance, a copy of your receipt showing the date of the appliance’s purchase, and the serial number on your appliance. At that time, you may be asked to ship your appliance, freight charges prepaid, to TRAVIS INDUSTRIES, INC. TRAVIS INDUSTRIES, INC., at its option, will repair or replace, free of charge, your TRAVIS appliance if it is found to be defective in material or workmanship within the time frame stated within this 7 year warranty. TRAVIS INDUSTRIES, INC. will return your appliance, freight charges (years 1 to 5) prepaid by TRAVIS INDUSTRIES, INC., to your regional distributor, or dealership.
4. Check with your dealer in advance for any costs to you when arranging a warranty call. Mileage or service charges are not covered by this warranty. This charge can vary from store to store.
**LP Instructions**

The GSR Stepper Motor Kit (SKU 94400999) is required for converting this appliance to LP. The kit contains the stepper motor (regulator), torx wrench, and pilot orifice. The burner orifices are shipped with the appliance.

**Convert the appliance prior to installing the gas line to ensure proper gas use.**

1. Remove the glass (see page 21). Remove the logs and embers (if installed - page 23)
2. Remove the ember trays and burner (see below). Grasp the burner with both hands and lift it straight up and out of the firebox. Remove and discard the back air shield.
3. Remove and discard the manifold cover (see below).
4 Follow the directions below to replace the orifices.

- Use a 1/2" open end wrench to unscrew the two orifices.
- Screw each LP orifice in so the orifice protrudes 15/16" (24mm) (indicating full insertion).

5 Install the new manifold cover included in owner's pack (see illustration below).
Optional Equipment (for qualified installers only)

6 Remove the pilot orifice following the instructions below. Replace with the propane pilot orifice

- Lift the pilot hood off the pilot assembly.
- Use a hex wrench to unscrew the orifice.
- Remove the orifice and replace with the LP orifice. Screw the orifice all the way in and replace the pilot hood.

Orifice Identification:
- LP (Propane) Orifice
- NG (Natural Gas) Orifice

NOTE: when re-attaching, this pin lines up with the notch in the pilot hood.

7 Replace the firebox components. Install the logs and embers. Replace the glass.

8 Carefully remove the control cover to access the stepper motor (see the illustrations below). The stepper motor (adjustable regulator) has an installation sheet included with it – make sure to follow all of the directions. Disconnect the wiring from the stepper motor. Remove the stock stepper motor and replace with the LP version. – MAKE SURE IT IS CORRECTLY ORIENTED. Secure using the screws included with the motor – tighten to 25 Lb-inches. Leak test this area after installation to verify proper installation. Re-attach the wiring.

9 Make the gas line connection, bleed the gas line (if applicable), start the heater and thoroughly leak-test all gas connections and the gas control valve.
Lower Surround Panel

The older lower surround panel (sku 98500619 and 98500628) are installed in a different fashion than illustrated in the instruction sheet included with the panel. Follow the directions below.

1. Prepare the panel following the directions below.

   - Use the larger DVL Insert Bracket
   - Discard the bottom clips
   - Discard the smaller DVS Insert Bracket
   - Use tape to secure the clips to the bracket (you may also wedge the clips into place). This holds the clips in place during installation.

   - Secure the lower panel to the bracket with the nuts (included with the panel).

2. Attach the panel to the insert following the directions below.

   - Attach the lower surround panel to the inset with the nuts (included with the panel).
