Installation Sizing

When using this trim, the insert will be located 1-1/4" forward of its standard location relative to the fireplace (see illustration below). This will position the appliance an extra 1-1/4" onto the hearth and 1-1/4" less into the fireplace. This will affect fireplace sizing and hearth requirements (see insert manual for details).

One-Piece Panel Trim (see part numbers below)

Installation

Install the panel trim as shown below.

Micro (1/16")
Standard
Screwdriver

Top Trim

"L" Bracket

Right Side
Trim

Trim Installation:
Insert one leg of each "L" bracket into the top and side trim piece. Align the trim to form a precise corner, then tighten the two set screws with a small standard screwdriver. Slide the trim over the panels. Place the spring clips behind the panels at the locations shown. This keeps the trim tight against the panel.

Optional Knock-Out

An optional knock-out is provided on both sides if the power cord is routed behind the surround panel.
